

# *TRIPORT*

SEAPORT WITH DIRECT INTEGRATION  
TO UPRAIL SYSTEM

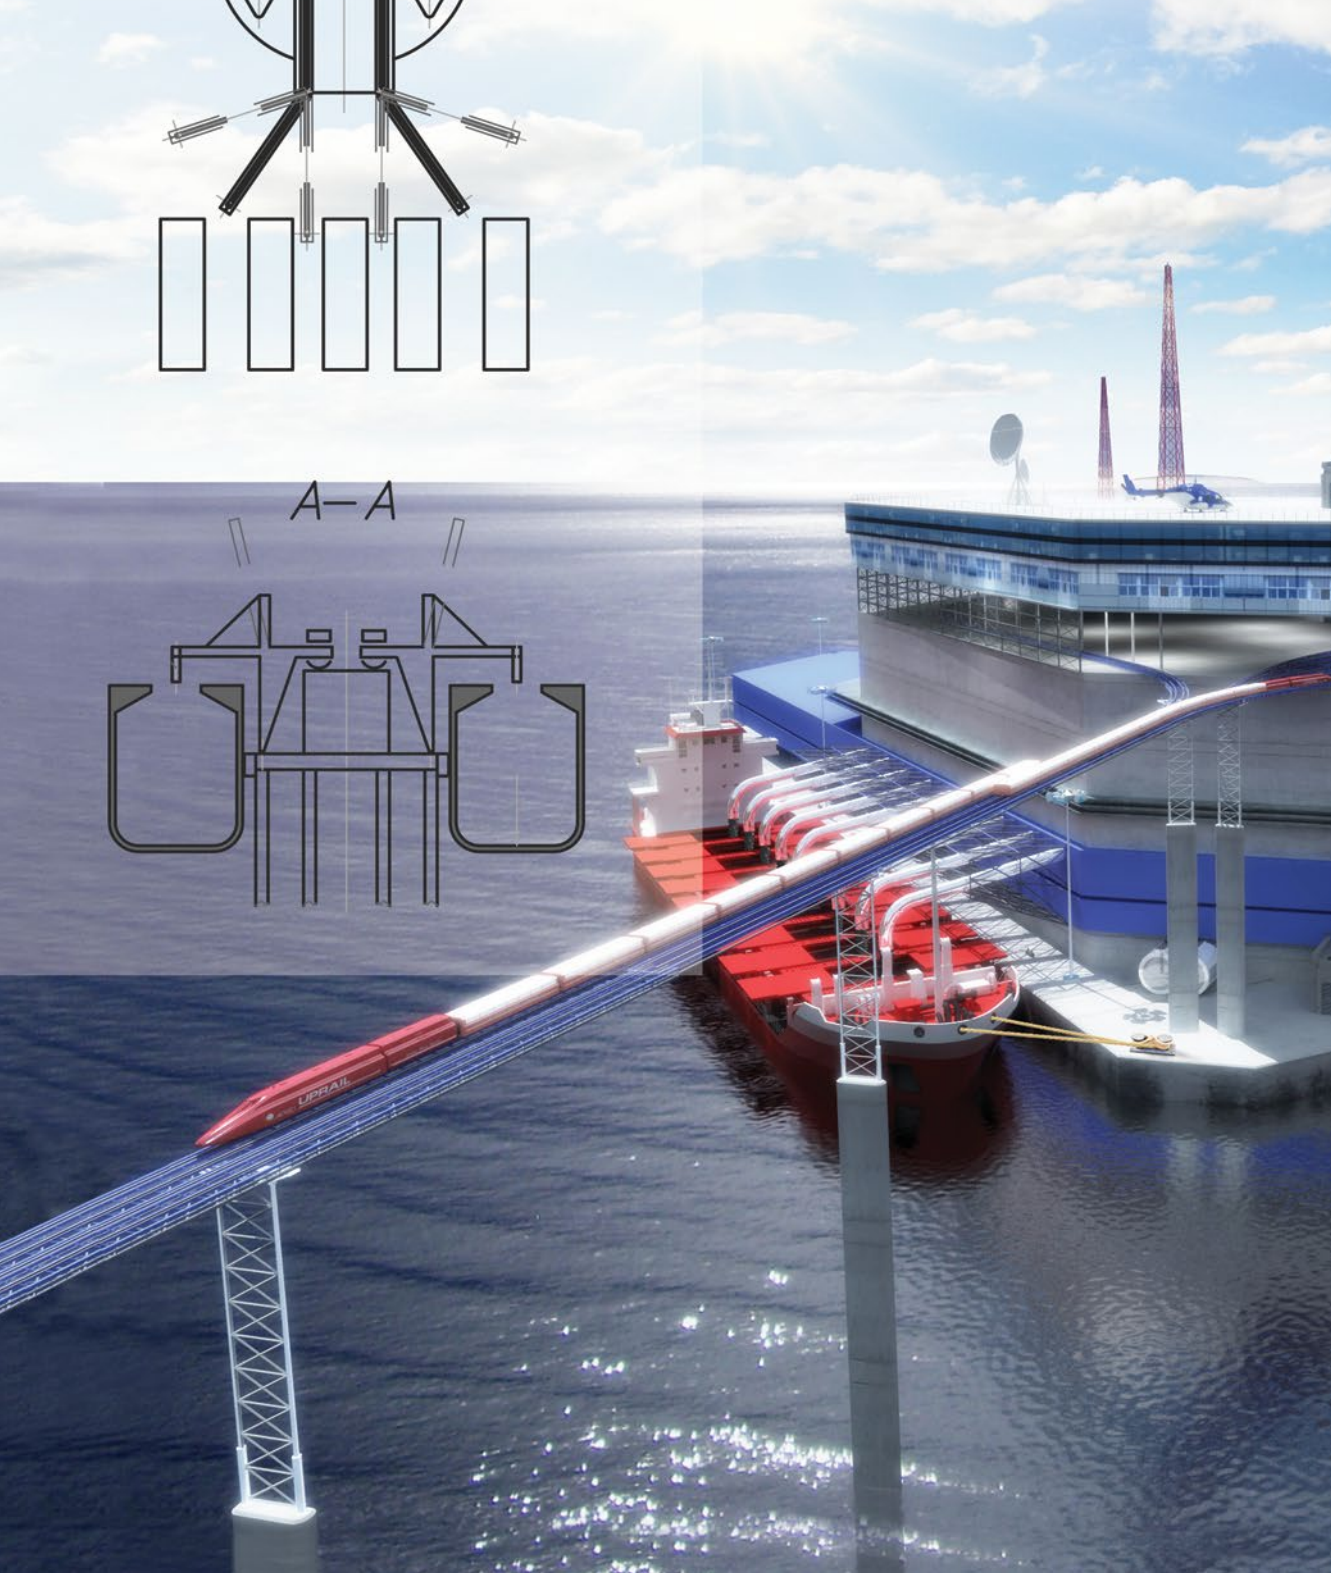

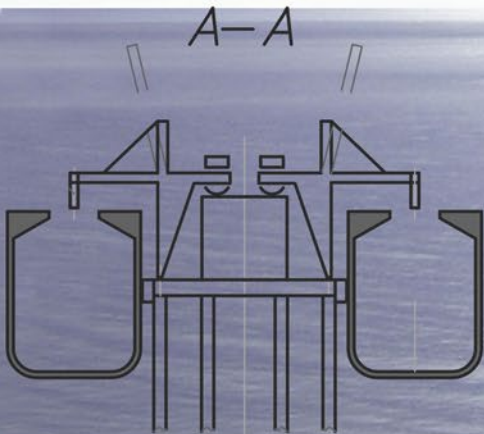

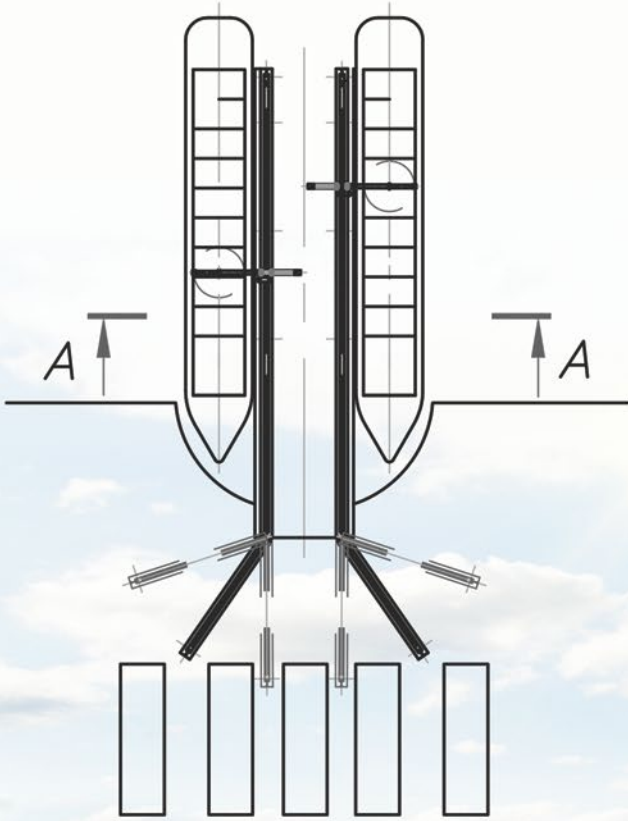

# TRIPORT

## Basic Loading Scheme

Seaport is a point where bulk commodities are loaded/unloaded to/from customer vessels. Thus seaports become centres of logistics in the world transport infrastructure. However today hundreds of bulkers with time-charter rate of \$100,000 per day are waiting in queues to be loaded/unloaded for days losing millions of dollars.

Henceforth the problem of shortage of the deep-water ports can be solved by using TRIPORT system.

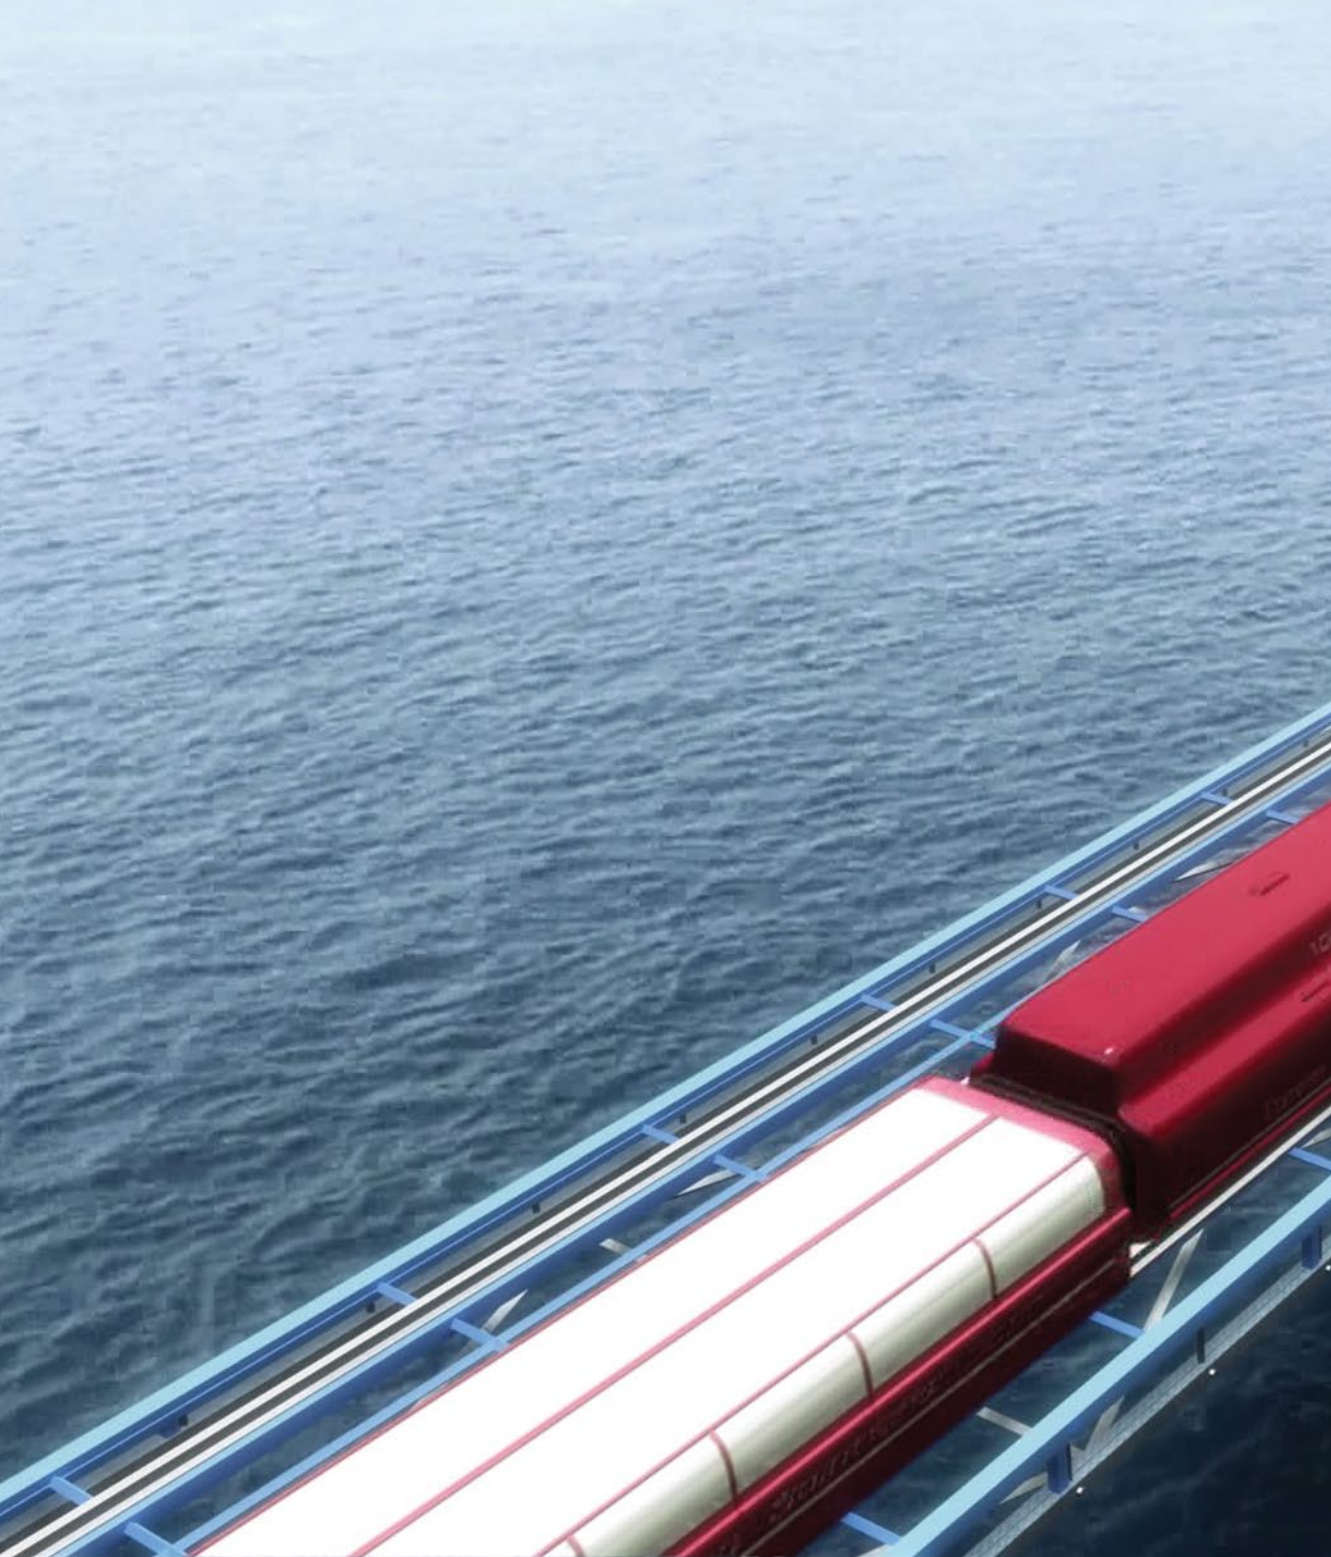

## *Highlights of Off-shore Port:*

- Direct connection to UPRAIL allowing to avoid extra loading/unloading operations reducing transport expenses
- No need to build onshore vast stockpiles for commodities
- Reduce building CAPEX as there is no need to do expensive works on seabed
- Reduce losses on demurrage of bulkers
- Provides simultaneous loading-unloading of three ships with non-stop 24 hours operation with overall capacity of 100 Mtpa
- Offshore location of the Port significantly reduce interference in to onshore environment and localize industrial area
